

BETA PROGRAM • SETUP GUIDE

Let's get Canopy running on your Zoho CRM

This takes about 10 minutes, just once. After today, everything syncs and rebuilds itself automatically every hour, so all you have to do from here on is open your Sheet and read.

BEFORE YOU START

What Canopy Beta actually does ?

Canopy Beta uses the G-connector free extension by Xappex for making connections between your Zoho CRM and a Google spreadsheet doc. In this google sheet document, you will find a first idea of a future template of Digital Canopy: "The Leads Pipeline" with 3 pages - Leads - Dashboard - Alerts -

This is an early version; it's not complete and is meant to be improved upon. If you're reading this, it means you're part of the project. Your feedback is therefore extremely important for its development.

Step 1 – Installation

- A. Open the Google Sheet link from your beta access portal, the one you unlocked with your personal code. When Google Sheets asks, click "**Make a copy.**"
- B. First, you'll need to open the Google Sheet that's already been prepared for the beta. You'll see a small "☁ canopy" menu next to the "help" menu.

If it doesn't appear, please contact support.

- C. In your new Sheet, open *Extensions* → *Add-ons* → *Get add-ons*. Search for "**G-Connector for Zoho CRM**" (by Xappex) and install it.

It's free, and it only takes a moment. This little add-on is the bridge between Google Sheets and Zoho CRM. Canopy does all its work on top of the data it brings in, so this step is worth getting right.

[Here](#)

*Just installed it? If you see a red error banner right away, don't worry, just reload the page once. Fresh installs almost always need one reload before they work.

Step 2 – Autorisations

- A. Open **Extensions** → **G-Connector for Zoho CRM** → **Login**. Sign in with your own Zoho account and approve the connection

- B. Once you're logged in to "G-Connector," you'll need to authorize Canopy to modify this file. To do this, open the "Canopy" menu and click "1. Authorize Canopy."

Step 3 – Pull your Leads and schedule the sync

- A. Import your data. Go to G-Connector for Zoho CRM → Get Module Data.

- B. In the “Module Data Configuration” menu, open the ‘Leads’ module. To ensure that Canopy works properly, import all available fields: click “Address” and select the entire list, as shown in the photo and validate it.

Data Operations

D. Set **Frequency** to "Hourly," pick an **Execution Time**, uncheck "**All Worksheets**" and select only **Sheet1**. Click "**Add to Scheduler**," then "**Apply**."

Last Step – Magic of Canopy

Click on the “ canopy” menu, then on “2. Build / Rebuild Leads Pipeline,” accept any permissions if prompted, and wait a few seconds. The report will be generated, and you don’t need to do anything else—Canopy sets up formulas directly in the cells, which update automatically.

Here's what shows up once Canopy finishes building:

Leads	A clean, readable version of your CRM data, with status, follow-up alerts, and days-idle tracking built right in.
Dashboard	Live KPIs, your conversion funnel, team performance, and lead segments, place.
Alerts	Stale leads, hot leads, and exactly what to do about each one.

From here, everything updates itself every time G-Connector refreshes. There's no "regenerate" button to hunt for, because you won't need one.

TROUBLESHOOTING

Most hiccups here have a one-click fix. Try these first.

A red error message right after installing G-Connector (something like "PERMISSION_DENIED")

Reload the page once. Fresh installs need it, it's normal.

A screen saying "Google hasn't verified this app"

That's expected — it's just Google being cautious about a small add-on. Click "Advanced", then "Go to G-Connector (unsafe)". You're only authorizing your own copy with your own Zoho account, nothing leaves your Google account.

The "☁ Canopy" menu doesn't show up next to Help

Reload the page. This menu only loads when the Sheet opens, so if you were already on the page when it got added, a refresh brings it in.

You clicked "Build / Rebuild" but Leads, Dashboard or Alerts look empty
Make sure Step 3 (Get Module Data) actually pulled your Zoho leads into Sheet1 first — Canopy builds its report from that data.

Still stuck after trying these? That's genuinely useful for us to know — reply to the email that sent you this guide, or write to contact@digitalsubstrate.io. A screenshot helps a lot if you can grab one.

This is an early, hand-run beta, not a polished product yet, so if a step confuses you or something looks wrong, that's exactly what this phase is for.

Just reply to the email that sent you this guide, or write to **contact@digitalsubstrate.io**.

We'd genuinely rather hear from you than have you stuck.

Thanks for being one of the first to try Canopy. It means a lot to us.
